SUMMARY

Software Engineer with 2+ years of experience building scalable backend systems and microservices powering NCR's enterprise loyalty platform handling millions of transactions daily. Experienced in Java, Spring Boot, Node.js, and cloud-native architectures on GCP, designing high-performance APIs and distributed systems. Passionate about building reliable, production-grade platforms that scale.

TECHNICAL SKILLS

Programming Languages: Java, Python, JavaScript, TypeScript, C

Backend Development: Spring Boot, Node.js, Express.js, FastAPI, REST APIs, GraphQL, Microservices

Frontend Development: React, React Native, Tailwind CSS, HTML5, CSS3, Bootstrap

Databases: PostgreSQL, MySQL, MongoDB, Redis, Oracle

Cloud & DevOps: GCP (GKE, Cloud Run, Cloud Dataflow, Cloud Build), AWS, Docker, Jenkins, Kubernetes

Testing & Quality: JUnit, Selenium, Cucumber, Gatling, BlazeMeter, SonarQube

Tools & Platforms: Git, Linux, CI/CD Pipelines, Apache Beam, Render, Firebase, Supabase

WORK EXPERIENCE

Software Engineer I | NCR Voyix | Jan 2022 – Dec 2023

- Designed and developed scalable Java Spring Boot microservices powering NCR's enterprise loyalty platform supporting real-time promotions, offers, and rewards processing across retail and restaurant POS systems.
- Built and maintained high-performance RESTful APIs using Java, Spring Boot, and Node.js, supporting reliable transaction processing and offer evaluation in high-traffic, low-latency environments.
- Improved system performance by optimizing SQL queries, MongoDB indexes, caching layers, and service-to-service communication, resulting in a 20% reduction in API response times and improved platform scalability.
- Deployed and managed cloud-native services on Google Cloud Platform using GKE, Cloud Run, and Cloud Dataflow, supporting distributed, event-driven workflows with high availability.
- Automated CI/CD pipelines with Jenkins and Cloud Build, enabling faster, more reliable releases across environments while reducing deployment errors and operational overhead.
- Improved code quality and production stability by refactoring backend services, raising SonarQube coverage from 85% to 92%, and adding 100+ unit and integration tests, supporting 40+ production features.

PROJECTS

Bookshelf – AI-Powered Book Discovery & Reading Assistant

Live Demo: <https://bookshelf-lq5o.onrender.com/>

- Built a secure full-stack book discovery application using FastAPI and Supabase, implementing REST APIs and Google OAuth to let users search, save, and organize books using the Google Books API.
- Designed and implemented data models and APIs to store user profiles, saved books, and genre-based collections, ensuring reliable data retrieval across authenticated sessions.
- Integrated an AI assistant (Chatbase) for book summaries and recommendations, and added cloud-based logging and analytics to track usage and guide feature improvements.

CampExplorer – Full-Stack Campground Review & Mapping Platform

Live Demo: <https://campexplorer-luxp.onrender.com/>

- Built a full-stack campground listing and review platform using Express, MongoDB, and EJS, implementing authentication, CRUD operations, and RESTful APIs for managing campground listings and reviews.
- Integrated MapTiler geolocation APIs and Cloudinary image uploads, and deployed the application on Render, adding custom error handling and input validation to ensure reliable performance.

EDUCATION

Master of Information Technology & Management

Jan 2024 - Dec 2025

Illinois Institute of Technology, Chicago, IL

Relevant Coursework: Operating Systems Security, Service-Oriented Architectures, Advanced Database Management

Bachelor of Engineering, Information Technology & Management | VCE, Hyderabad, India

Jun 2018 - Jul 2022
